Proprietary Calibration Certificate

Object: thin film solar cell

Manufacturer: Solibro

Serial number: 130618-3A

Internal serial number: SBR003

Calibration mark: 1003196SBR0813

Customer: Solibro Reserach AB
Vallvägen 5
756 51 Uppsala
Sweden

Datafile: 00379_SBR003_27.09.2013_18-41_IV-Kennlinie.txt

Number of pages: 6

Date of calibration: 27.09.2013

Date of receipt: 12.08.2013

Head of calibration lab: Freiburg i.B., 11.10.2013

Examiner:

Wilhelm Warta

Astrid Semeraro

1. Description of the calibrated object

The device under test is a CIGS thin film solar cell on glass substrate. The contacts are realised by contact pads. The temporal stability of the solar cell performance was not controlled.

2. Measurement procedure

The calibration of the test sample was performed at Standard Testing Conditions (STC) in accordance with /1/ under irradiation with a steady-state class A solar simulator according to /6/. The irradiance is controlled with a monitor cell during the measurement in order to correct fluctuations. The divergence of the peripheral beams is < 8°. The solar cell is kept at constant temperature on a vacuum chuck.

Traceability of the reference solar cell

Identity-Nr.:	Certificate-Nr.:	Traceability:
028-2010	47179-PTB-10	PTB

The spectral mismatch - caused by the deviation of the simulator spectrum from the standard spectrum AM1.5G /3/ in combination with the different spectral response of reference cell and device under test (DUT) – is calculated according to /4/ and corrected.

For the spectral mismatch correction the spectral distribution of the solar simulator is measured with a spectroradiometer, the spectral response of the DUT is measured with a grating monochromator according to /5/ (cf. Calibration Mark: xxx).

The traceability of the measurement of the spectral distribution to SI-Units is achieved using a standard lamp for the calibration of the spectroradiometer.

Identity-Nr.:	Certificate-Nr.:	Traceability:
BN-9101-451	40006-11-PTB	PTB

The entire inspection equipment used is subject to a controlled quality management system according to ISO 9001:2008.

3. Measurement conditions

Standard Testing Conditions (STC):

Total Irradiance: 1000 W/m²
Temperature of the DUT: 25 °C
Spectral irradiance distribution: AM1.5G Ed.2 (2008) /3/

The measurement of the IV-curve is performed with a 4-quadrant power amplifier and a set of Burster calibration resistors.

4. Measurement result

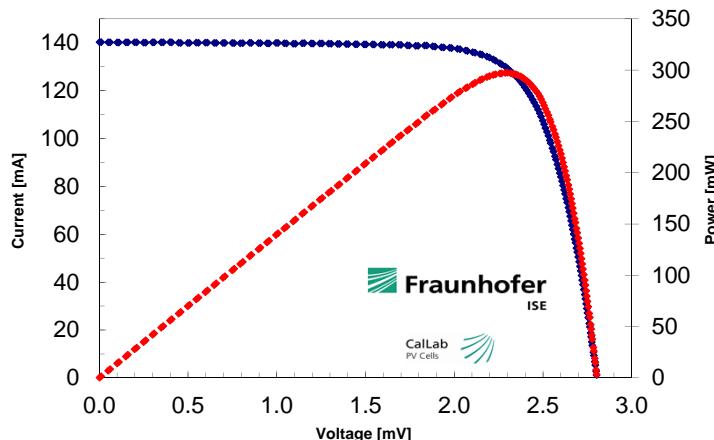

Mismatch factor : = 1.0007
(for spectral correction)
Area (da)¹: = (15.892 ± 0.049) cm²

IV-curve parameter under standard testing conditions (STC):

V _{OC}	=	(2.804	±	0.014) V
I _{SC} (Ed.2 - 2008)/3/	=	(140.2	±	3.5) mA
I _{MPP}	=	129.6			mA
V _{MPP}	=	2.293			V
P _{MPP}	=	(297.2	±	8.9) mW
FF	=	(75.60	±	0.76) %
η	=	(18.70	±	0.56) %

For comparison purposes:

Calculated value according to previous standard spectrum:
I_{SC} (Ed.1 - 1989)/2/ = (139.4 ± 3.5) mA

¹: (t) = total area, (ap) = aperture area, (da) = designated illumination area

The expanded measurement uncertainty resulting of the standard measurement uncertainty multiplied with a factor k=2 is specified. The calculation was carried out according to the "Guide to the expression of Uncertainty in Measurement". It corresponds to a Gaussian distribution referring to the deviations of the measurement value within a probability of 95%.
